Verdict: CLEAN (89.1% confidence)

Attribution method: gradient_saliency

This image was classified as CLEAN with 89.1% confidence (high confidence).

- This verdict is based on attention-entropy anomaly scoring: the attention pattern closely matched what the detector learned to expect from clean, unmanipulated images.
- Attribution (gradient_saliency) shows the most forensically significant pixels are tightly concentrated in a small region (0.1% of the image above threshold).

This report was generated automatically by TRACER. Verdicts are produced by an automated detector (Module 5's offline evaluation measured 86% binary accuracy, 0.95 AUC on its test set) and are not a substitute for expert human review. Treat every verdict below as an investigative lead, not a final determination.
